

College of Engineering, Construction and Living Sciences  
Bachelor of Information Technology  
ID737001: Game Development  
Level 7, Credits 15  
**Project Game Development + Demo**

## Assessment Overview

In this **group** assessment, you will design and develop a **2D platformer** game using **Unity** and **C#**.

## Learning Outcome

At the successful completion of this course, learners will be able to:

1. Design and develop a game using industry standard tools, technologies and practices.

## Assessments

Assessment	Weighting	Due Date	Learning Outcome
Assignment	30%	07-06-2024 (Friday at 4.59 PM)	1
Project: Game Development + Demo	70%	21-06-2024 (Friday at 4.59 PM)	1

## Conditions of Assessment

You will complete this assessment during your learner-managed time. However, there will be time during class to discuss the requirements and your progress on this assessment. This assessment will need to be completed by **Friday, 21 June 2024 at 4.59 PM**.

## Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** over all assessments in **ID737001: Game Development**.

## Authenticity

All parts of your submitted assessment **must** be completely your work. Do your best to complete this assessment without using an **AI generative tool**. You need to demonstrate to the course lecturer that you can meet the learning outcome(s) for this assessment.

However, if you get stuck, you can use an **AI generative tool** to help you get unstuck, permitting you to acknowledge that you have used it. In the assessment's repository **README.md** file, please include what prompt(s) you provided to the **AI generative tool** and how you used the response(s) to help you with your work. It also applies to code snippets retrieved from **StackOverflow** and **GitHub**.

Failure to do this may result in a mark of **zero** for this assessment.

## Policy on Submissions, Extensions, Resubmissions and Resits

The school's process concerning submissions, extensions, resubmissions and resits complies with **Otago Polytechnic** policies. Learners can view policies on the **Otago Polytechnic** website located at <https://www.op.ac.nz/about-us/governance-and-management/policies>.

## Submission

You **must** submit all application files via **GitHub Classroom**. Here is the URL to the repository you will use for your submission – <https://classroom.github.com/a/dbrTesMQ>. If you do not have not one, create a **.gitignore** and add the ignored files in this resource - <https://raw.githubusercontent.com/github/gitignore/main/Unity.gitignore>. The latest application files in the **main** branch will be used to mark against the **Functionality** criterion. Please test before you submit. Partial marks **will not** be given for incomplete functionality. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

## Extensions

Familiarise yourself with the assessment due date. Extensions will **only** be granted if you are unable to complete the assessment by the due date because of **unforeseen circumstances outside your control**. The length of the extension granted will depend on the circumstances and **must** be negotiated with the course lecturer before the assessment due date. A medical certificate or support letter may be needed. Extensions will not be granted for poor time management or pressure of other assessments.

## Resits

Resits and reassessments **are not** applicable in **ID737001: Game Development**.

## Instructions

### Functionality - Learning Outcome 1 (50%)

- Application **must** open without code or file structure modification in **Unity**.
- The four games you will create are:
  - Introduction to Unity scripting - Sheep Saving (25%)
  - Game mechanics - Tower Defence (25%)
  - Maze generation - 3D Dungeon Crawler (25%)

- AI strategy - Chess (25%)
- In the [course materials repository](#) on **GitHub**, you will find the following directories:
  - [01-introduction-to-unity-scripting](#)
  - [02-game-mechanics](#)
  - [03-maze-generation](#)
  - [04-ai-strategy](#)
- In each of these directories, you will find additional directories - **lecture notes** and **assessment tasks**.
  - The **lecture notes** consist of detailed step-by-step tasks that will help you develop skills and knowledge in **Unity** while building a simple game. In addition, you will be introduced to commonly used algorithms in games.
  - The **assessment tasks** consist of step-by-step tasks that will help you extend the functionality of your game. However, these tasks are not as detailed as the **lecture notes**. The **advanced assessment tasks** consist of **independent research** tasks that will help you extend the functionality of your game to an **intermediate level**.

## Code Quality and Best Practices - Learning Outcome 1 (45%)

- A **Unity .gitignore** file is used.
- Appropriate naming of files, variables, methods and classes.
- Idiomatic use of values, control flow, data structures and in-built functions.
- Efficient algorithmic approach.
- Sufficient modularity.
- Each file has an **XML documentation comment** located at the top of the file. In the **root** directory of the **course materials** repository, you will find an **XML documentation comment** example in the **xml-documentation-comment.txt** file.
- Formatted code.
- No dead or unused code.

## Documentation - Learning Outcome 1 (5%)

- A **GitHub** project board to help you organise and prioritise your development work. The course lecturer needs to see consistent use of the **GitHub** project board for the duration of the assessment.

## Additional Information

- **Do not** rewrite your **Git** history. It is important that the course lecturer can see how you worked on your assessment over time.
- You need to show the course lecturer the initial **GitHub** project board before you start your development work. Following this, you need to show the course lecturer your **GitHub** project board at the end of each week.
