

College of Engineering, Construction and Living Sciences Bachelor of Information Technology ID737001: Game Development Level 7, Credits 15 Assignment

Assessment Overview

In this assessment, you will form a **group of two or three** to design and develop a game in collaboration with **Bachelor of Design (Communication)** learners using **Unity** and **C#**. In addition, marks will be allocated for code quality and best practices, documentation and Git usage.

Assessments

Assessment	Weighting	Due Date	Learning Outcome
Assignment	30%	07-06-2024 (Friday at 4.59 PM)	1
Project: Game Development + Demo	70%	21-06-2024 (Friday at 4.59 PM)	1

Conditions of Assessment

You will complete this assessment during your learner-managed time. However, there will be time during class to discuss the requirements and your progress on this assessment. This assessment will need to be completed by **Friday, 07 June 2024** at **4.59 PM**.

Pass Criteria

This assessment is criterion-referenced (CRA) with a cumulative pass mark of **50%** over all assessments in **ID737001: Game Development**.

Authenticity

All parts of your submitted assessment **must** be completely your work. Do your best to complete this assessment without using an **Al generative tool**. You need to demonstrate to the course lecturer that you can meet the learning outcome(s) for this assessment.

However, if you get stuck, you can use an **AI generative tool** to help you get unstuck, permitting you to acknowledge that you have used it. In the assessment's repository **README.md** file, please include what prompt(s) you provided to the **AI generative tool** and how you used the response(s) to help you with your work. It also applies to code snippets retrieved from **StackOverflow** and **GitHub**.

Failure to do this may result in a mark of zero for this assessment.

Policy on Submissions, Extensions, Resubmissions and Resits

The school's process concerning submissions, extensions, resubmissions and resits complies with **Otago Polytechnic** policies. Learners can view policies on the **Otago Polytechnic** website located at https://www.op.ac.nz/about-us/governance-and-management/policies.

Submission

You **must** submit all application files via **GitHub Classroom**. Here is the URL to the repository you will use for your submission – https://classroom.github.com/a/UgQiawTf. If you do not have not one, create a **.gitignore** and add the ignored files in this resource - https://raw.githubusercontent.com/github/gitignore/main/Unity.gitignore. The latest application files in the **main** branch will be used to mark against the **Technical and Professional Proficiency** criterion. Please test before you submit. Partial marks **will not** be given for incomplete functionality. Late submissions will incur a **10% penalty per day**, rolling over at **5:00 PM**.

Extensions

Familiarise yourself with the assessment due date. Extensions will **only** be granted if you are unable to complete the assessment by the due date because of **unforeseen circumstances outside your control**. The length of the extension granted will depend on the circumstances and **must** be negotiated with the course lecturer before the assessment due date. A medical certificate or support letter may be needed. Extensions will not be granted for poor time management or pressure of other assessments.

Resits

Resits and reassessments are not applicable in ID737001: Game Development.

Instructions

Technical and Professional Proficiency (Individual and Group) - Learning Outcome 1 (50%)

- Group:
 - The game needs to open without code or file structure modification in **Unity**.
 - Gather requirements from the client and deconstruct them into user stories.
 - Design and develop a game using Unity and C# that meets the client's requirements.

- Demo the game on itch.io.
- Individual:
 - Contribute a meaningful amount of code to the game. This will be judged by the number of Git commits and the number of lines of code contributed.
 - Perform the following for each feature that is merged into the **main** branch of the **GitHub** repository:
 - * Code review another team member's code.
 - * Play test the feature and provide feedback to the team member.

This needs to be documented in the GitHub issue that the feature is associated with.

 Communicate with team members. This should be through Microsoft Teams. If you wish to use another communication tool, you need to get approval from the course lecturer. Provide screenshots of your communication in the GitHub repository.

Code Quality and Best Practices (Individual) - Learning Outcome 1 (30%)

- A Unity .gitignore file is used.
- Appropriate naming of files, variables, methods and classes.
- · Idiomatic use of values, control flow, data structures and in-built functions.
- · Efficient algorithmic approach.
- Sufficient modularity.
- Each file has an XML documentation comment located at the top of the file. In the root directory of the course materials repository, you will find an XML documentation comment example in the xmldocumentation-comment.txt file.
- · Formatted code.
- · No dead or unused code.

Documentation and Git Usage (Individual and Group) - Learning Outcome 1 (20%)

- Group requirement GitHub issues and a project board to help you organise and prioritise your development work. The course lecturer needs to see consistent use of GitHub issues and the project board for the duration of the assessment.
- Group requirement In a Microsoft Word document called game-document, explain the following:
 - Core concept
 - Design pillars
 - Main features and mechanics
 - Target platform and audience
 - Interface and controls
 - Basic story
 - Visual style
 - Audio style
 - Known issues and bugs
 - Future improvements
 - A URL to the game on itch.io.

- Individual requirement Select two interesting game mechanics that you implemented and explain in a Microsoft Word document called reflections the following:
 - What did you implement?
 - What did you research during the implementation? Provide a link to the resources you used.
 - What did you try? What worked? What did not work?
 - What did you learn?
 - How can you apply what you learned to future games?
 - During the development of your game, what did you find most challenging professionally? How did you overcome it?
- · Individual and group requirement Correct spelling and grammar.
- Individual requirement Your Git commit messages should:
 - Reflect the context of each functional requirement change.
 - Be formatted using an appropriate naming convention style.

Additional Information

- Do not rewrite your Git history. It is important that the course lecturer can see how you worked on your assessment over time.
- You need to show the course lecturer the initial GitHub project board or issues before you start your development work. Following this, you need to show the course lecturer your GitHub project board or issues at the end of each week.
